

## ANNOUNCEMENT

### OrganoClick Launches New Product Segment

Sweden, 4 December 2007 - OrganoClick AB has launched a new product segment to its product portfolio composed of fine chemicals. Using new organocatalytic processes for organic synthesis, a number of  $\beta$ -amino acids previously not on market will be manufactured by OrganoClick and sold by OrganoClick as well as different agents and distributors.

Organic molecules are the most common group of compounds used for the development of pharmaceuticals and  $\beta$ -amino acids are very important building blocks for many drugs used for e.g. cancer treatment. The portfolio of organic molecules are currently composed of 18 different structures but OrganoClick will continue to expand this segment in order to create an interesting and diversified product portfolio composed of unique, innovative structures.
